

Customization: How to Hide Content

If there are chapters, procedures, activities or other content from Milady that you don't teach, would like to replace with your own material or just don't want your students to complete, you have the option to hide the Milady content in the learning path so your students won't see it or have access to it. Don't worry though, while content can be hidden from the student view, it can never be permanently deleted from MindTap and can always be reinstated if desired.

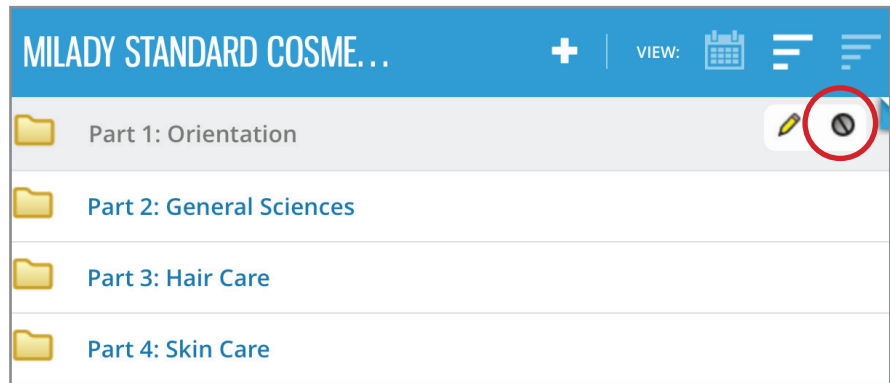

To start hiding content you must be in the Unit View of the learning path.

There are 3 different types of content that you can hide in the learning path. You can hide:

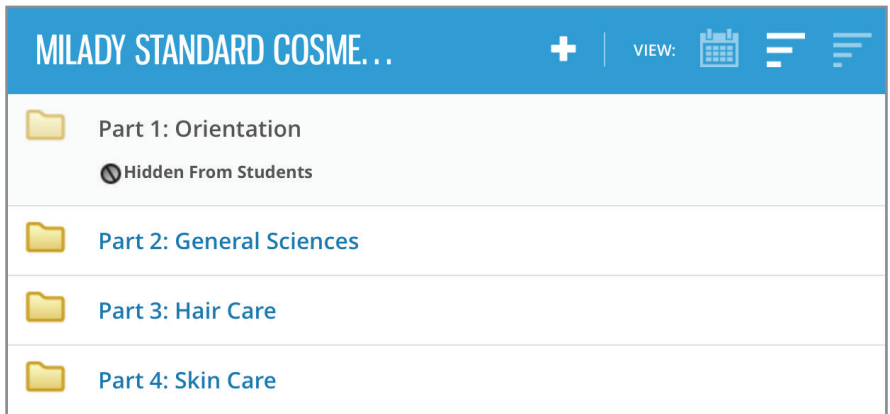

- Entire Part Folders
- Chapter Folders
- Chapter Activities

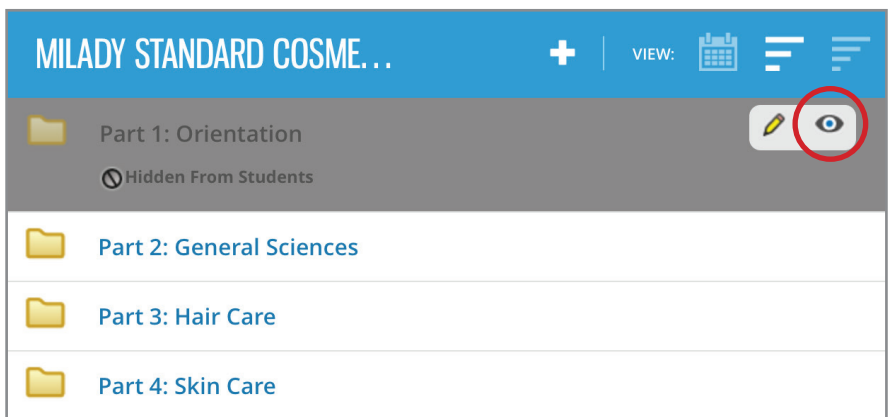

Start by choosing a piece of content that you would like to hide. In this example, we will hide a Folder. Hover over the desired folder and click the Hide button .

The Folder will then be grayed out, stating that it's hidden from students.

To bring the hidden Folder back, hover over the Folder and click what's now an eyeball and it will return to everyone's view.

It is important to note that when you hide an Activity/Resource in Unit View it also becomes hidden from the Gradebook even if it has previously been completed by students.
